Abstracts

Wind energy is a clean, renewable, and widely distributed source of energy. Marine wind turbines harness the wind energy and convert it into electricity. Marine wind energy can help in reducing air pollution and greenhouse gas emission to a significant extent. Marine wind turbines are nowadays equipped on boats and ferries in order to charge the battery. The working principle for marine wind turbine is similar to that of land-based wind turbines. The turbines are fitted with generators that convert mechanical power of blades of wind turbine into electrical energy
