According to our (Global Info Research) latest study, the global Marine Zinc Sacrificial Anode market size was valued at US\$ 155 million in 2025 and is forecast to a readjusted size of US\$ 212 million by 2032 with a CAGR of 5.1% during review period.

A Marine Zinc Sacrificial Anode is a conventional consumable cathodic-protection component widely used for corrosion control on saltwater vessels. Once installed on the hull or underwater hardware, the zinc anode forms a galvanic cell with the protected metal and corrodes preferentially, reducing corrosion of hull plates, propellers, shafts, rudders, seawater valves and cooling-system components. Zinc anodes benefit from a long operating history, mature standards, strong repair-channel acceptance and stable performance in saltwater environments, so they remain widely used in vessel maintenance, propulsion systems, small boats and aftermarket replacement parts. In 2025, Global Marine Zinc Sacrificial Anode sales are estimated at 32,000 tons, with an average ex-works price of 4,700 US\$/Ton. The Marine Zinc Sacrificial Anode industry chain starts from zinc ingots, zinc alloy ingots, minor alloying elements such as aluminum, cadmium and tin, steel inserts, bolts, stainless-steel fasteners, molds and packaging materials.

The Marine Zinc Sacrificial Anode market is mainly supported by replacement demand in traditional saltwater vessels and boats, especially for propellers, shafts, rudders, trim tabs, outboards, sterndrives and seawater cooling systems. These components require frequent replacement, are well covered by distribution inventories, and are highly familiar to vessel owners and repair shops, allowing zinc anodes to maintain a stable aftermarket base. Zinc anodes also benefit from mature standards and proven saltwater performance, but their higher weight, lower protection efficiency per unit mass than

aluminum anodes, environmental pressure and zinc-price volatility are shifting part of newbuilding and ballast-tank demand toward aluminum products, making zinc anodes a more stable maintenance-oriented category rather than a high-growth segment.
