The global Maritime Connectivity market size is expected to reach \$ 76820 million by 2029, rising at a market growth of 9.1% CAGR during the forecast period (2023-2029).

Maritime Connectivity refers to the use of various communication technologies in the maritime transportation industry to realize the interconnection between different equipment and systems, as well as the connection with onshore facilities and services. These communication technologies can include satellite communications, television relay, wireless networks, radar communications, autonomous ship identification systems (AIS), and more. By achieving good maritime networking, ships and other offshore equipment can interact more effectively with onshore facilities and services, improving safety, navigation efficiency, cargo tracking, and more. In addition, maritime networking can also provide more information resources and entertainment services to passengers and crew.
