Abstracts

In the history, harbor controlled radar was developed in order to increase the efficiency of waterways. With the rapid growth in the marine industry, the safety and security at harbors were difficult to achieve. To resolve this problem, many systems were developed like radio-communications, navigation rules, electronic chart systems and identification systems. Then came the evolution of maritime traffic management system. These systems were needed in order to manage, plan and supervise the traffic on road, air and ports. At present, the maritime traffic management systems are used to manage traffic on ports, harbor and coastal areas in order to increase the safety and security of materials and humans.
