A marking gun is a device used in manufacturing and logistics for imprinting characters and symbols on various items. The device's motor drives the printer head, which ejects ink or powder to mark products or packaging with necessary information like part numbers, lot numbers, shipping details, or contents. This machine consists of four primary components: a motor, printer head, ink cartridge, and powder cartridge.

Marking guns are known for their ability to execute high-speed, high-volume printing, adaptable to different material surfaces. They come in two main types: ink-based and powder-based, each offering vibrant color prints and durable markings suitable for various industrial applications.
