An engraving machine is a device used to apply letters and patterns to various materials and shapes. It is similar to a printer, but differs in that it does not apply ink, etc., but rather physically scrapes or chemically discolors the object. Therefore, printed materials printed by an engraving machine are resistant to friction and other factors and do not easily fade away. In the past, printing was done by applying pressure using a needle or a mold, but in recent years, laser marking press have been developed to print non-contact.
