Marking stations are equipment that are mainly used for engraving and marking on various materials and shapes. Marking stations are designed to improve production efficiency and automation, reduce labor requirements, and improve product quality. For example, some marking stations integrate robotic arms and laser marking devices, and use a circular turntable to realize product cycle loading and automatically complete product marking, thus solving the problem of insufficient integration and low automation of traditional marking stations. This automation not only improves production efficiency, but also reduces labor costs and improves the consistency of product quality.
