Martingales and horse breastplates are pieces of equestrian tack used for controlling and guiding the movement of the horse while riding. A martingale is a strap or set of straps that attach to the girth or chest of the horse, pass through the bit rings, and then split into two or more branches, which connect to the reins. It is used to limit the upward and forward movement of the horse's head during riding, providing additional control and stability. A horse breastplate is a piece of equipment that runs across the chest of the horse and is attached to the saddle. It helps to prevent the saddle from slipping backward during riding and provides support and stability to the saddle and rider.
