## Abstracts

The global Mask-Free Lithography Equipment market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

On basis of consumption regions, Asia-Pacific occupied the largest sales market in 2022. It is followed by North America, Europe.

Photolithography is the standard manufacturing technique used for micro-patterning of electronic circuits, as well as other devices such as micro-electromechanical systems (MEMS) and micro-fluidics. Maskless lithography (MPL) is a photomask-less photolithography-like technology used to project or focal-spot write the image pattern onto a chemical resist-coated substrate (e.g. wafer) by means of laser or electron beam. Mask-free processes have been developed for rapid prototyping, such as laser direct-writing and scanning electron-beam lithography.

This report studies the global Mask-Free Lithography Equipment production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Mask-Free Lithography Equipment, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
