A masking compound is a product and action that is used to protect a surface from solvents and prevent scratches. Masking compound also means 'to cover up' or 'to wrap up.' The main products used for masking include masking tape, solid wax, and masking compound. These are important products used in the industrial and architectural fields. In recent years, however, masking tapes and masking paints have been attracting attention in the field of the arts as well, with products that offer great convenience in the creation of artwork.

Masking compounds are effective when applied as an anti-plating agent to areas where plating is not required. They can be applied by brushing or dipping. Dipping is a coating process in which the object to be painted is immersed in resin or chemicals to achieve the desired paint effect. This process is also known as impregnation.
