Abstracts

According to our (Global Info Research) latest study, the global Maskless Lithography System market size was valued at USD 322.3 million in 2023 and is forecast to a readjusted size of USD 504.2 million by 2030 with a CAGR of 6.6% during review period.

In maskless photolithography system, the radiation that is used to expose a photosensitive emulsion (or photoresist) is not projected from, or transmitted through, a photomask. Instead,most commonly,the radiation is focused to a narrow beam which directly writes the image into the photoresist, one or more pixels at a time.A key advantage of maskless photolithography is the ability to change lithography patterns from one run to the next, without incurring the cost of generating a new photomask. This may prove useful for double patterning.

Global key players of maskless lithography system include Raith(4Pico), Heidelberg Instruments, miDALIX, JEOL, etc. Global top four manufacturers hold a share over 45%. Europe is the largest producer of maskless lithography system, holds a share over 50%, followed by Japan and North America. In terms of product, electron beam lithography is the largest segment, with a share over 60%. And in terms of application, the largest application is material science, with a share about 20%, followed by optical device and microelectronics.

The Global Info Research report includes an overview of the development of the Maskless Lithography System industry chain, the market status of Microelectronics (Electron Beam Lithography, Direct Laser Writing), MEMS (Electron Beam Lithography, Direct Laser Writing), and key enterprises in developed and developing market, and
