Abstracts

This report mainly focus on Mass Finishing Machines. Mass finishing is the general description for vibrating or flowing an abrasive media around usually a number of non-fixtured parts, moving randomly within the mass of the abrasive media.

Various types of equipment generate energy that is transferred thru the media to the part being processed. The transfer of energy and randomly moving parts automates the finishing process, with part loading and unloading to be addressed. Mass finishing is frequently used for deburring, burnishing and rust and scale removal, as well as brightening and polishing parts and component surfaces.
