Abstracts

The global Mass Timber Building market size is expected to reach \$ 26296 million by 2032, rising at a market growth of 9.5% CAGR during the forecast period (2026-2032).

Mass Timber Building is a structure that primarily uses engineered wood products?such as cross-laminated timber (CLT), glued-laminated timber (glulam), nail-laminated timber (NLT), or dowel-laminated timber (DLT)?for its structural components, including floors, walls, columns, and beams. These buildings leverage the strength, sustainability, and aesthetic appeal of large-format wood panels and members, offering a viable alternative to traditional steel or concrete construction. Mass timber buildings can range from low-rise to high-rise structures and are designed to meet rigorous safety, fire, and seismic standards while also reducing carbon footprint and construction time.

From the current development perspective, the global mass timber building industry has gradually moved beyond the early exploratory stage dominated by a few demonstration projects, entering a new era of simultaneous advancement in standardization, engineering, and commercialization. The technological system is maturing, and market applications are steadily expanding. However, significant regional imbalances remain. The European and North American markets continue to maintain their leading position globally, leveraging their long-accumulated technological advantages, relatively complete standard systems, and sustained policy support. Mid- and low-rise timber-framed buildings have been widely implemented in residential, office, and educational sectors, while high-rise timber-framed projects are continuously breaking through height and functional limitations, forming a number of benchmark demonstration cases. Meanwhile, the domestic market is experiencing rapid growth. Domestic CLT and glued laminated timber production capacity is steadily increasing, and material costs are continuously optimizing, laying the industrial foundation for large-scale applications.

Currently, large-scale timber-framed projects are mainly concentrated in cultural tourism, office, and educational sectors, with hybrid structures as the primary implementation form, demonstrating a pragmatic and stable approach in technology selection. At the same time, industry standards and regulations are gradually being improved, providing necessary institutional guarantees for project implementation. However, overall, the application scale, technology popularization, and maturity of each link in the industrial chain in the domestic market still need to be further improved. The market's awareness and acceptance of Mass Timber Building is gradually improving, and there is broad room for future development.
