Abstracts

The global Massage Therapy Robot market size is expected to reach \$ 2742 million by 2032, rising at a market growth of 15.3% CAGR during the forecast period (2026-2032).

Massage Therapy Robot generally refers to robotic systems equipped with robotic arms, AI vision, force-feedback control, and intelligent therapy algorithms that can autonomously perform massage, rehabilitation therapy, and sports recovery treatments. Under the narrow industry definition, traditional massage chairs are typically excluded, while AI robotic massage systems, rehabilitation robots, autonomous wellness robots, and intelligent physiotherapy robots are included. In 2025, global Massage Therapy Robot production reached approximately 157.01 K Units. The upstream segment of the Massage Therapy Robot industry mainly consists of core component suppliers, AI software developers, and sensor manufacturers. Key components include servo motors, precision reducers, robotic arms, soft actuators, pressure and torque sensors, thermal therapy modules, EMS stimulation modules, vision cameras, and AI processors. The downstream segment mainly covers home healthcare, rehabilitation centers, sports recovery, elderly care, wellness spas, and autonomous wellness service stations.

Key growth drivers include global population aging, increasing prevalence of chronic muscle pain, rising sports recovery demand, expanding rehabilitation healthcare spending, and shortages of professional massage therapists. At the same time, advances in AI vision, soft robotics, force-feedback control, and large-model interaction technologies are significantly improving the personalization and precision of massage therapy robot.

This report studies the global Massage Therapy Robot production, demand, key manufacturers, and key regions.
