Abstracts

Master alloy is a base metal such as aluminium, copper and other products, which combines with a certain percentage of one or two other elements. It is a semi-finished product and is produced in various shapes (ingot, waffle plate, rod in coils, etc).

SCOPE OF THE REPORT:

The key raw materials of master alloy are nonferrous metals, such as aluminium, copper, vanadium, titanium, niobium, and so on. The price fluctuations of raw materials will impact the master alloy industry directly and deeply. The price of master alloys shows continuous down trend in the recent few years. Moreover, the price level varies largely according to the ingredients of master alloys.

The worldwide market for Master Alloy is expected to grow at a CAGR of roughly 0.1% over the next five years, will reach 3340 million US\$ in 2024, from 3310 million US\$ in 2019, according to a new GIR (Global Info Research) study.

This report focuses on the Master Alloy in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.
