## Abstracts

According to our (Global Info Research) latest study, the global Mastitis Detectors market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Mastitis Detector is a detection device for early, subclinical mastitis that cannot be detected visually. This detector measures changes in the electrical resistance of milk because the development of subclinical mastitis is accompanied by an increase in the salt content of milk, which involves changes in electrical resistance. This rule is considered the most reliable indirect test for diagnosing subclinical mastitis.
