Abstracts

The global Material Flow Index Tester market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The material flow index tester is an instrument that can be used to test the material index. Melt Flow Index is a measure of the resistance (viscosity) of a polymer melt to flow at a given temperature and a given force for a predetermined period of time. Melt flow testing simply measures how well a polymer flows when it melts. The result of melt flow testing, known as melt mass flow rate (MFR) or melt volume flow rate (MVR), is defined as the mass or volumetric amount and pressure of polymer flowing through a small mold at a specified temperature.
