Abstracts

The global Material Jetting (MJ) market size is expected to reach \$ 155 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

Material jetting is the equipment which could mold materials with material jetting technology. Material jetting has the added advantage of being able to 3D print using multiple materials at once. Objects can be produced with a variety of materials as well as customize the specific area where those materials are placed. This eliminates the need to print separate layers of different materials and assemble them later. In a single run, one can produce complete products with parts made from separate materials.

Global Material Jetting (MJ) main players are Stratasys, 3D Systems, HP, Vader Systems etc. Global top four manufacturers hold a share over 90%. North America is the largest market, with a share nearly 60%.

This report studies the global Material Jetting (MJ) production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Material Jetting (MJ) and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
