A lifter is a machine or device used to lift or lower heavy objects. Industrial equipment that raises pallets loaded with products or products in boxes is often referred to as a lifter. It uses mechanical force to lift objects. It uses a motor or hydraulic system to generate force and has a mechanism to transmit it. Thus, they can lift heavy objects that cannot be transported by human power. In addition, safety devices and control mechanisms are incorporated to ensure that objects are lifted securely and safely. Designed to minimize the risk of accidents and injuries, the lifter also contributes to improved safety.

The main benefits of using lifters are increased work efficiency, labor savings, and reduced risk of back pain, since lifting and lowering heavy objects is facilitated by the use of lifters.
