Abstracts

The global Matrix IR Sensor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Infrared technology has a variety of uses in daily life and industry. It is a device to detect the infrared radiation in its environment and output electrical signals. Infrared sensors can detect motion and measure the heat of objects, and can also detect infrared radiation invisible to our eyes. Infrared Chang'an is a photodiode sensitive to infrared light. When the infrared light irradiates the photodiode, the change of resistance and output voltage is proportional to the intensity of infrared light.
