According to our (Global Info Research) latest study, the global Matting Agent for Leather Coating market size was valued at US\$ 281 million in 2024 and is forecast to a readjusted size of USD 423 million by 2031 with a CAGR of 6.1% during review period.

A matting agent for leather coating is a specialized additive used in the formulation of coatings and finishes applied to leather surfaces. The primary purpose of a matting agent in leather coatings is to reduce the gloss or shine of the leather's surface, creating a matte or satin finish. This matte finish is often preferred for both functional and aesthetic reasons, and it can give leather products a more natural, subdued, or contemporary appearance.

Sustainability and Environmental Concerns: The trend toward more sustainable and eco-friendly leather coatings has led to the development of matting agents that are low in volatile organic compounds (VOCs) and other harmful chemicals. Manufacturers have been working to meet stringent environmental regulations and reduce the carbon footprint of leather coating processes.

Improved Matting Efficiency: Leather finishers and coating manufacturers have been seeking matting agents that offer superior matting efficiency. This includes the ability to achieve the desired level of mattness with lower quantities of matting agent, reducing production costs and waste.

Matting Agent Versatility: Matting agents that are versatile and compatible with a wide range of leather types and coating formulations have been in demand. This allows for greater flexibility in meeting the specific needs of different leather products, from fashion

accessories to furniture upholstery.

Application Diversity: Matting agents have been adapted for various leather applications, including fashion, automotive, upholstery, and accessories. Meeting the unique requirements of each sector has been a market trend.
