MBB round ribbon refers to an interconnection welding ribbon with a cylindrical structure and a diameter between 0.2-0.4 mm. The cylindrical structure of the MBB ribbon can shorten the width of the main grid, reduce the amount of material used, and help downstream companies control costs. The incident light from the MBB round ribbon is effectively absorbed by the cell after secondary reflection by the glass, which is more conducive to the collection of sunlight by the cell and enhances the absorption rate. It plays an important role in conducting electricity and increasing output voltage and power.
