According to our (Global Info Research) latest study, the global MBBR Carrier market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

MBBR stands for Moving Bed Biofilm Reactor, which is a type of wastewater treatment technology. MBBR carriers are essential components within MBBR systems. These carriers typically consist of small plastic elements, such as beads, cylinders, or discs, that provide a surface area for the growth of biofilm. The biofilm contains microorganisms that break down organic matter and remove pollutants from the wastewater. The movement of the carriers within the reactor tanks helps to ensure effective mixing and aeration, enhancing the treatment process. Overall, MBBR carriers play a crucial role in promoting the growth of beneficial microorganisms and optimizing wastewater treatment efficiency.
