## Abstracts

According to our (Global Info Research) latest study, the global MBS Impact Modifier for Packaging market size was valued at US\$ 673 million in 2025 and is forecast to a readjusted size of US\$ 911 million by 2032 with a CAGR of 4.4% during review period.

In 2025, global MBS Impact Modifier for Packaging production reached approximately 451.3 kilotons with an average global market price of around US\$1450 per ton. Single-line annual production capacity averages 11 kilotons with a gross margin of approximately 22%. The upstream of MBS Impact Modifier for Packaging relies primarily on three types of basic chemical monomers: methyl methacrylate (MMA), butadiene, and styrene. Downstream applications are highly concentrated in areas with stringent requirements for transparency, toughness, and hygiene safety. Among these, food packaging (e.g., transparent water bottles, edible oil bottles) is the dominant segment, accounting for over 50% of global consumption, followed by pharmaceutical packaging (e.g., blister packs, medicine bottles) and high-end consumer goods packaging. The core drivers of current demand are clear: on one hand, global 'plastic reduction' and 'circular economy' policies have not diminished the rigid need for transparent, lightweight, and drop-resistant packaging. Instead, they are driving upgrades toward higher quality, making MBS—which can achieve both high transparency and high impact resistance in rigid PVC packaging—an irreplaceable choice. On the other hand, rising consumer spending in emerging markets and the widespread adoption of e-commerce and parcel logistics have intensified the demand for packaging that withstands drop tests during transportation, directly boosting the need for high-performance MBS. The real business opportunities lie in leveraging MBS's near-monopolistic technical advantage in transparent PVC packaging to firmly secure and expand its market share in traditional strongholds such as mineral water

bottles and shrink films. Concurrently, there is a need to actively develop high-compatibility grades that can adapt to newer polyesters (e.g., PETG) or bio-based plastics, enabling entry into emerging niche markets with higher sustainability requirements. Furthermore, by forming deep partnerships with downstream packaging giants, companies can transition from material suppliers to collaborative partners offering integrated 'material-process' solutions.

MBS Impact Modifier for Packaging is a core high-performance additive engineered specifically to address the stringent and often competing performance requirements in rigid and semi-rigid transparent plastic packaging, such as bottles, containers, and films. Its fundamental value lies in its unique core-shell polymer structure, where a rubbery core provides exceptional low-temperature impact strength to prevent brittle failure during transport and handling, while a grafted shell ensures optimal compatibility with the host resin (primarily PVC, but also others) to maintain critical optical clarity and surface gloss without causing stress whitening. This allows packaging to achieve the necessary toughness for durability and drop resistance while preserving the high transparency vital for product visibility and consumer appeal, a balance difficult to attain with many alternative modifiers. Furthermore, it enhances the melt flow and processability of the polymer compound, enabling more efficient high-speed production of complex, thin-walled packaging designs with consistent quality.
