Abstracts

MCH ceramic heating element is a heating element used in electric heating devices. The metal (high-temperature melting point) slurry is printed on the ceramic casting body, laminated by hot pressing, and then heated at high temperature. The ceramic heating element, which is made by sintering ceramics and metal under the protection of hydrogen atmosphere, has the advantages of corrosion resistance, high temperature resistance, long life, high efficiency and energy saving, uniform temperature, good thermal conductivity, and fast thermal compensation speed. MCH ceramic heating elements are widely used in household industrial heating equipment, electrical appliances, medical equipment and other fields, such as electric kettles, electric stoves, heating plates, etc., to provide long-lasting and stable heating functions for these equipment.
