## Abstracts

According to our (Global Info Research) latest study, the global MCP and eMCP market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

MCP stands for Multi-Chip Package, which is a type of integrated circuit package that contains multiple semiconductor dies. These dies can be different types of chips, such as microprocessors, memory chips, or other integrated circuits. The individual dies are typically encapsulated within a single package, allowing for a more compact and integrated design. eMCP, stands for embedded Multi-Chip Package. It is a type of MCP that includes a combination of embedded flash memory and other chips in a single package. This type of package is commonly used in mobile devices, such as smartphones and tablets, where space is limited, and there is a need for both memory and other integrated circuits.
