Abstracts

The global MCP Server Governance Platforms market size is expected to reach \$ 1191 million by 2032, rising at a market growth of 25.9% CAGR during the forecast period (2026-2032).

The MCP server governance platform is an enterprise-grade software platform built around the Model Context Protocol (MCP). It manages external tools, databases, business systems, and MCP servers accessible to AI agents, handling functions such as registration, access control, policy orchestration, operational auditing, and risk monitoring. It specifically addresses challenges associated with enterprise AI agents connecting to toolchains, including fragmented integration, unauthorized calls, key leakage, and audit trail maintenance. Overall, the market remains in the early adoption and rapid standardization phase; as enterprise AI agents transition from pilot programs to production environments, the combined gross margin for platform software subscriptions and professional integration services is projected to range between 55% and 75%.
