Abstracts

Sensors, transmitters and controllers, sensor housings, cables and connectors, and buffers and standard reagents are the main product types in measurement technology for downstream processing. Of these, sensors are widely preferred over the other product types. Single use sensors find increasing application among end users such as biopharmaceutical companies, F&B organisations, contract manufacturing and research organisations, and academic and research institutes owing to their inherent properties such as ease of use and low risk of contamination during the changeover process.
