Meat Marinades are formulated seasoning products used to flavor, tenderize, moisturize, and improve the sensory characteristics of meat and poultry before cooking or further processing. They typically contain salt, sugars, spices, herbs, acids, oils, sauces, flavorings, enzymes, and functional food ingredients. Depending on the application, marinades can be supplied as liquids, pastes, powders, or concentrated formulations. They are widely used for beef, pork, poultry, lamb, seafood, processed meat, and ready-to-cook products in household, foodservice, and industrial food-processing applications. The product boundary covers formulated marinades specifically designed for meat preparation, excluding individual spices, basic ingredients, and general-purpose sauces.

The upstream industry supplies spices, herbs, salt, sugar, edible oils, acids, flavor compounds, enzymes, preservatives, thickeners, and other food ingredients. The midstream industry develops formulations and produces marinades through weighing,
