According to our (Global Info Research) latest study, the global Mechanical Isolators market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Mechanical isolators can be used from hundreds of thousands of tons of equipment to lightweight precision instruments. They are usually used in places with static compression of more than 5 cm or in places where temperature and other environmental conditions do not allow the use of rubber.

The mechanical vibration isolator has large static compression, low natural frequency, good low-frequency vibration isolation, resistance to oil, water and solvent erosion, and is not affected by temperature changes; it will not age.
