Mechanical Load Sensing Valve is a control valve that detects and responds to the load changes of the hydraulic system through mechanical means. It automatically adjusts the output flow of the hydraulic pump and the system pressure according to the magnitude of the load pressure to meet the actual requirements of the actuating elements and improve the energy efficiency and control accuracy of the system. This type of valve is typically used in the hydraulic systems of construction machinery and agricultural machinery to optimize the performance and energy utilization efficiency of the equipment.
