A mechanical rotary gate is a control device that uses a mechanical transmission mechanism to drive the gate body to rotate, thereby opening and closing channels or regulating flow. It features a stable structure and smooth opening and closing, and is suitable for liquid or bulk material handling. It is widely used in water conservancy, municipal, environmental protection, and industrial conveying systems.

Upstream industries mainly include basic materials and general components such as steel, stainless steel, castings, seals, bearings, motors, and reducers. Downstream applications cover industries such as water conservancy projects, municipal water supply and drainage, sewage treatment, power, chemicals, and solid material conveying. The global unit price of a mechanical rotary gate is US\$658, with annual sales of approximately 219,400 units and a global annual production capacity of approximately 240,000 units. The industry profit margin is 20%.
