According to our (Global Info Research) latest study, the global Mechanical Safes market size was valued at US\$ 392 million in 2025 and is forecast to a readjusted size of US\$ 515 million by 2032 with a CAGR of 4.0% during review period.

A safe (also called a strongbox or coffer) is a secure lockable box used for securing valuable objects against theft and/or damage from fire. A safe is usually a hollow cuboid or cylinder, with one face being removable or hinged to form a door.

The mechanical safe lock we talk about here is the traditional dial combination lock, key locks are not mentioned here as we are mainly comparing combination locks. To open the lock you need to spin the dial left and right several times for the right combination code to be entered. They are traditional, durable and reliable and are still used in high security applications like bank vaults.

This report studies Mechanical Safes market.

Mechanical safe locks have been the standard for over 100 years. They're tested by time and experts. With the proper service, the mechanical dial locks can stay problem-free for a long time. Even without proper service, the locks are still relatively stable with a very long lifespan. Can be ordered with a key locking on dial to prevent it from being manipulated. Mechanical safe locks have lower costs. No batteries, of course.
