The global Mechanical Vacuum Booster market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Mechanical vacuum boosters are essential in achieving and maintaining the desired vacuum levels in various industrial processes. They enhance the performance of primary vacuum pumps, allowing for efficient and reliable evacuation of gases, vapors, and air from the system.

A mechanical vacuum booster, also known as a mechanical booster pump, is a type of vacuum pump used to increase the performance and efficiency of a primary vacuum pump. It works by mechanically compressing and increasing the pressure of the gas or vapor being pumped, which helps to evacuate the system more effectively and achieve higher vacuum levels.
