The global Mechanical Ventilation Ventilator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A multi-mode ventilator is a mechanical ventilation device that can provide several different ventilation modes and settings. These different ventilation modes and settings can be adjusted according to the different needs of the patient to maximize the patient's ventilation efficiency and respiratory function. Common multi-mode ventilator ventilation modes include Pressure Control Ventilation (PCV), Volume Control Ventilation (VCV), Assist Control Ventilation (ACV), Synchronized Intermittent Mandatory Ventilation (Synchronized Intermittent Mandatory Ventilation, SIMV) and so on. These modes have different settings in terms of ventilation cycle, inspiratory pressure, and expiratory pressure to meet the different needs of patients. The multi-mode ventilator also has other functions, such as positive end-expiratory pressure (Positive End-Expiratory Pressure, PEEP) and high-flow oxygen therapy (High Flow Oxygen Therapy, HFOT), which can improve oxygen intake and respiratory function, and reduce airway pressure. Resistance and risk of ventilator-related complications. Multi-mode ventilators are usually used to treat patients with severe respiratory failure requiring mechanical ventilation support, such as ARDS (Acute Respiratory Distress Syndrome), Chronic Obstructive Pulmonary Disease (COPD), etc.

This report studies the global Mechanical Ventilation Ventilator production, demand, key manufacturers, and key regions.
