Abstracts

The media degasser is an instrument specially designed to provide dissolution medium degassing for dissolution experiments. It has the functions of automatic liquid suction, online preheating, vacuum degassing, quantitative liquid supply and multi-cup liquid supply. It reduces the tedious steps in manual operation, solves the problems of slow speed, difficult to control precision, and air is brought in again when adding the dissolution medium, and displays important indicators such as preheating temperature and vacuum degree in real time. Dissolved gases in water can be removed quickly and safely.
