Media video processing services refer to the provision of full-process content processing and optimization services such as video editing, audio mixing, special effects addition, subtitle dubbing, format conversion, etc. for radio and television, film and television production, self-media, e-commerce live broadcast and other fields. This type of service can be completed through professional studios, or remote and collaborative content production can be achieved with the help of cloud platforms and AI tools to meet the needs of diversified content and fast-paced dissemination.

With the rapid development of short videos, streaming platforms, digital advertising, and social media marketing, global video content production continues to grow, driving the increasing demand for media video processing services. The increasing demand from film and television companies, television stations, brands, advertising agencies, and MCN agencies for high-quality, fast-delivery, and multi-platform compatible video content has led to a continuous growth in professional services such as video editing, color grading, audio post-production, subtitling, motion graphics, visual effects (VFX), and content localization. Meanwhile, cross-border content distribution and global marketing have further driven the demand for multilingual subtitles, dubbing, and version production. The widespread application of new technologies such as AI video editing, automatic subtitle generation, intelligent material management, cloud collaborative production, and remote post-production has effectively improved

production efficiency, reduced delivery costs, and promoted the continuous development of the media video processing service industry towards intelligent, cloud-based, globally collaborative, and one-stop content production.
