Abstracts

The global Medial Dynamic Blood Glucose Meter market size is expected to reach \$ 2531 million by 2032, rising at a market growth of 9.3% CAGR during the forecast period (2026-2032).

In 2025, global Medial Dynamic Blood Glucose Meter production reached approximately 19,500 K Units, with an average global market price of around 67.5 US\$/Unit.

Medial Dynamic Blood Glucose Meter refers to a professional in-vitro diagnostic medical device used in medical institutions such as hospitals, clinics and community health centers to continuously monitor the blood glucose concentration of patients in real time. Different from home dynamic blood glucose meters, it has higher measurement accuracy, stricter quality control standards and more comprehensive data analysis functions, and is usually operated by professional medical personnel. The device collects interstitial fluid glucose data continuously through an implantable probe, transmits the data to a professional monitoring terminal through a stable data transmission system, and generates detailed blood glucose fluctuation reports, which can accurately reflect the patient's blood glucose changes day and night, including fasting, postprandial and sleep periods. It is mainly used for the diagnosis, treatment adjustment and condition monitoring of diabetic patients, especially for critically ill patients, pregnant women with gestational diabetes and patients with unstable blood glucose, providing accurate and reliable data support for clinicians to formulate personalized treatment plans.

The market demand for Medial Dynamic Blood Glucose Meter shows a steady and rigid growth trend, driven by the deepening of medical reform and the increasing attention to chronic disease management, with broad business opportunities. In terms of demand,

the continuous rise in the prevalence of diabetes has led to an increasing demand for professional blood glucose monitoring in medical institutions; the promotion of graded diagnosis and treatment policies has enabled community health centers and primary clinics to gradually equip professional dynamic blood glucose monitoring equipment, expanding the market demand. In addition, the continuous advancement of precision medicine has raised higher requirements for the accuracy and comprehensiveness of blood glucose monitoring, prompting medical institutions to update and replace traditional blood glucose meters with more professional medial dynamic blood glucose meters. From the perspective of business opportunities, first, focusing on technological innovation to improve product accuracy, data transmission stability and compatibility with medical information systems can enhance core competitiveness, meeting the professional needs of medical institutions. Second, strengthening cooperation with medical institutions, participating in government procurement and medical device bidding, can expand market coverage. Furthermore, providing supporting after-sales services and professional operation training for medical personnel, and developing customized products for different medical scenarios (such as intensive care units, obstetrics and gynecology) can further tap market potential and seize development opportunities in the professional medical monitoring track.
