According to our (Global Info Research) latest study, the global Medical 3D Video Laparoscopy market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A video laparoscope is an instrument with a tiny camera. Laparoscopic surgery is surgery performed using a laparoscope and its associated instruments. Use a cold light source to provide illumination, insert a laparoscopic lens (3-10mm in diameter) into the abdominal cavity, use digital camera technology to make the images captured by the laparoscopic lens transmit to the post-stage signal processing system through the optical fiber, and display it in real time on a dedicated monitor. device. The electronic laparoscope is composed of a pneumoperitoneum forming system, a camera imaging system, a power system and a flushing-suction system. Different from traditional surgery, laparoscopic surgery does not require laparotomy, and doctors perform surgery under direct vision with the help of a TV imaging system, which has dual effects of surgery and treatment. Laparoscopic technology integrates inspection, diagnosis, surgery, and treatment, and can be used according to the needs of the disease.
