Abstracts

The global Medical Absorbable Collagen Sutures market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Sutures are fibers, filaments, or thread-like materials used to hold tissue or a wound together. In surgical terms, sutures are used for apposition – that is, the placing (of tissue) side by side to allow healing. Sutures provide tensile support for wounds until the healing tissue has regained sufficient strength to exist without the sutures. Medical absorbable collagen sutures are made of animal-derived materials and can be absorbed by the human body.
