The global Medical Air Disinfection Machine market size is expected to reach \$ 237 million by 2029, rising at a market growth of 3.5% CAGR during the forecast period (2023-2029).

The key manufacturers of Medical Air Disinfection Unit include Laoken Medical Technology Co., Ltd., Novaerus, Sichuan Aojie Disinfection Equipment Co., Ltd., Chengdu Kengewang Ozone Electric Equipment Company Ltd., BIOBASE Group, Hangzhou Shengda High-tech Mechanical and Electrical Co., Ltd., Shandong Yuda Medical Equipment Co., Ltd., Jiangsu Shen Xing Photoelectricity Medical Apparatus Co., Ltd., etc. The manufacturers are mostly Chinese.

China is the world's largest market, with about 28% of the market. It is followed by Europe and the rest of the Asia-Pacific region, excluding China, with both around 20%.

In terms of type, it includes mobile type, wall-mounted type, cabinet type, and embedded type. Mobile type in the market share is the highest, accounting for about 44%.

It is mainly used in the hospital, clinic, and other places. The hospital account for about 76% of the application sites.

Medical air disinfection unit, also called medical air disinfection machine, is a machine that disinfects air through the principles of filtration, purification, and sterilization. Medical air disinfection unit refers to the air disinfection equipment that uses electrostatic dust removal purification technology, ion sterilization technology, ozone control technology and other disinfection and sterilization technologies to disinfect,

sterilize and purify the air. Among of them, Plasma and UV disinfection are two of the most commonly used methods.

Realize the inactivation of bacteria in the air, the closer the ultraviolet lamp is to the object to be sterilized, the more and faster the bacteria will be killed. In the range of ultraviolet radiation, the bacterium mortality rate can be guaranteed to be 100%, and no bacterium escapes. The principle of sterilization is to irradiate bacteria, viruses and other microorganisms with ultraviolet rays to destroy the structure of DNA (deoxyribonucleic acid) in the body, causing them to die immediately or lose their ability to reproduce. The wavelength of UV-C is 100-280nm, which belongs to the high frequency short wave. When the wavelength is 265nm, the sterilization effect is the strongest. It does so by deactivating the DNA and RNA of bacteria, viruses along with other harmful Microorganisms. It can quickly help decrease the microorganism risk in a room. The common ultraviolet lamps in the UV-C Disinfection System on the market include low-pressure mercury lamps and UVC LEDs. UVC LEDs have the advantages of low power consumption and high disinfection efficiency, and have gradually become a new trend of UV-C Disinfection System.

Plasma air disinfection and purification technology is a new technology integrating physics, chemistry, biology and environmental science. Plasma is also called the fourth state of matter. Low-temperature plasma is usually generated by gas discharge. In addition to neutral particles in the ground state, its interior is rich in electrons, ions, free radicals and excited state molecules (atoms). It has extraordinary molecular activation ability and can effectively kill microorganisms and bacteria.

In addition to killing bacteria, viruses, molds, spores and other so-called sterilization, some models can also remove formaldehyde, phenol and other organic pollutant gases in the indoor air, and can also kill or filter allergens such as pollen. At the same time, it can effectively remove the smoke and smell of smoking, the bad smell of the bathroom, and the body odor of people. The disinfection effect is reliable, and it can be disinfected under the condition of human activities, so as to realize the coexistence of man and machine.

According to different application fields, medical air disinfection unit can be divided into three series: medical, civil, and industrial. Among them, the market for medical air disinfection unit in the medical field is the largest. Medical air disinfection machine is used in medical places, including hospitals and clinics.
