Anesthesia is a kind of narcotic drug used in anesthesiology, which can temporarily and reversibly make people lose consciousness. Anesthetics fall into two broad categories: general anesthetics cause a reversible loss of consciousness; local anesthetics cause a reversible loss of sensation in a limited area of the body while maintaining consciousness. Combinations of narcotic drugs are sometimes used to enhance the effects of treatment, and side effects may also increase. Narcotic drugs, also known as poisonous anesthetics, first generally refer to drugs that can cause humans to fall into sleep, coma or unconsciousness. In the United States, it is used to refer to opioid drugs such as opium, heroin, morphine, pethidine, or derivatives of opioids.
