Medical Assistive technology (AT) refers to 'assistive products and related systems and services developed for people to maintain or improve functioning and thereby promote well-being'. It allows people with disabilities, ageing individuals, and others who experience limitations in participation in society to live independent, healthy and productive lives by participating in education, work and social activities. AT reduces the burden on caregivers and the need for formal health and support services.

Medical Assistive technology enables and promotes inclusion and participation, especially of persons with disability, aging populations, and people with non-communicable diseases. The primary purpose of assistive products is to maintain or improve an individual's functioning and independence, thereby promoting their well-being. They enable people to live healthy, productive, independent and dignified lives, and to participate in education, the labour market and civic life.

Assistive products maintain or improve an individual's functioning and independence, thereby promoting their well-being. Examples of assistive devices and technologies

include wheelchairs, prostheses, hearing aids, visual aids, and specialized computer software and hardware that increase mobility, hearing, vision, or communication capacities.
