## Abstracts

The global Medical Audiometers market size is expected to reach \$ 290 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

Audiometer is a device used to evaluate hearing loss during an audiology test. Usually, it is an individual piece of hardware that delivers pure tones of controlled intensity to one ear at a time, to which a patient responds when they can hear the tone. Many modern devices can either be used alone or connected to a computer and integrated with hearing conservation databases. Audiometer has different types, depending upon the frequency range, range of acoustic output, mode of acoustic presentation, masking facility, procedures used, and types of acoustic stimuli. It is commonly used in hospitals, audiology centers and research communities.

Global Medical Audiometers key players include William Demant, Otometrics, RION, Inventis, Welch Allyn, etc. Global top five manufacturers hold a share about 70%. North America is the largest market, with a share about 40%, followed by Europe, with a share about 25 percent. In terms of product, Hybrid Audiometer is the largest segment, with a share about 40%. And in terms of application, the largest application is Screening, followed by Diagnose, Clinical.
