The global Medical Automatic Electronic Sphygmomanometer market size is expected to reach \$ 677 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032).

Medical fully automatic electronic blood pressure monitors are automatic blood pressure measurement devices used in medical settings such as hospitals, clinics, and health check centers. They achieve rapid detection of indicators such as blood pressure and pulse through pressure sensing, cuff inflation, and algorithm recognition and display systems.

Upstream components include pressure sensors, air pumps, solenoid valves, cuffs, chips, displays, batteries, casings, algorithm software, and medical certification services; downstream applications target hospitals, primary care clinics, health check-up institutions, elderly care facilities, and chronic disease management platforms.

The global market price for medical fully automatic electronic blood pressure monitors is \$190 per unit, with global sales of approximately 2.24 million units and an annual production capacity of 4-6.5 million units. The industry profit margin is approximately 20%.

The future global market for medical fully automatic electronic blood pressure monitors will develop towards higher precision, intelligence, networking, and diversified application scenarios. With increasing demand for hypertension, cardiovascular disease, and chronic disease management, medical institutions' demand for automated, standardized, and data-traceable measurement equipment continues to rise. Products

will place greater emphasis on clinical accuracy, interference resistance, multi-population compatibility, and remote data management, and will accelerate integration with electronic medical records, health management systems, and internet healthcare platforms. Future competition will focus on measurement algorithms, sensor stability, medical certification, brand channels, and after-sales service capabilities.
