Bionics also known as biomedical implants are artificial addition to the body. These artificial implants mimic the function of the lost or non-functional body part such as limb or eye.

SCOPE OF THE REPORT:

This report focuses on the Medical Bionics in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Increasing accidents and injuries leading to amputations, rising number of people opting for organ transplants, and increasing pool of geriatric population and associated organ failures are some of the factors driving the growth of the global market.

Rise in geriatric population, increase in government focus on funding R&D initiatives, and upsurge in number of patients suffering from chronic diseases are expected to drive the market growth. Moreover, technological advancements, such as the cochlear implants, with speech recognition features that help to differentiate speech in noisy and reverberant situation fuel the demand for medical bionics. However, high cost of the devices and treatment and stringent approval process for these devices are expected to impede the market growth.

This region offers lucrative opportunities in this market owing to presence of large pool of patients suffering from chronic disorders such as cardiac disorders, neural disorders and hearing and vision loss.

The worldwide market for Medical Bionics is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
