According to our (Global Info Research) latest study, the global Medical Cannulated Compression Screw market size was valued at US\$ 686 million in 2025 and is forecast to a readjusted size of US\$ 964 million by 2032 with a CAGR of 5.0% during review period.

Medical Cannulated Compression Screw refers to an orthopedic internal fixation screw with a central cannulation, allowing accurate insertion into bone tissue over a guidewire and providing compression fixation between fracture fragments or bone segments through its thread design. It is commonly made from medical-grade titanium alloy or stainless steel and may be designed as headed, headless, fully threaded or partially threaded configurations. The product is widely used in femoral neck fractures, scaphoid fractures, ankle fractures, metatarsal fractures, joint fusion and small bone fracture fixation, offering accurate positioning, reduced surgical trauma, stable fixation and convenient handling. The unit price of Medical Cannulated Compression Screw typically ranges from several hundred dollars, with a gross profit margin usually between 50% and 70%.

The upstream supply chain of Medical Cannulated Compression Screw mainly includes medical-grade titanium alloy, medical stainless steel, precision bars, surface treatment materials, sterile packaging materials and CNC machining equipment. Raw material purity, mechanical properties, machining accuracy and surface quality directly affect implant safety and fixation performance. Midstream manufacturers are responsible for product design, precision machining, thread forming, cannulation processing, surface treatment, cleaning, sterilization, quality inspection, regulatory approval and development of supporting surgical instruments. Downstream customers mainly include

orthopedic departments of general hospitals, trauma centers, orthopedic specialty hospitals, foot and ankle surgery departments, hand surgery departments, sports medicine departments and medical device distributors, with end-use applications concentrated in fracture internal fixation, interfragmentary compression, joint fusion and minimally invasive orthopedic procedures.

Medical Cannulated Compression Screw is a mature and stable orthopedic implant used in trauma internal fixation, mainly driven by demand from fracture fixation, foot and ankle surgery, hand surgery and periarticular small bone fixation. With the wider adoption of minimally invasive surgery, the maturity of image-guided screw placement and increasing fracture treatment needs associated with aging populations, the product continues to hold strong clinical value. Future market competition will focus on material safety, thread design, compression performance, implantation accuracy, product portfolio completeness and supporting surgical instrument systems, while companies with comprehensive product series and strong clinical channels are expected to maintain stronger competitiveness.
