Cardiac catheterisation is a medical procedure in which a thin flexible tube (catheter) is guided through a blood vessel to the heart to diagnose or treat certain heart conditions such as blocked arteries or arrhythmias. Cardiac catheterisation provides the doctor with important information about the heart muscle, heart valves and blood vessels of the heart. During cardiac catheterisation, the doctor may complete different cardiac tests, provide treatment, or remove a piece of heart tissue for examination. Cardiac catheterisation can also be used to treat certain heart conditions (e.g. coronary angioplasty and stenting).
