## Abstracts

Carboxytherapy refers to the cutaneous and subcutaneous administration of carbon dioxide gas (CO<sub>2</sub>) for therapeutic purposes. Carboxytherapy originated at the Medical Spa of Royat, France in 1932 with the treatment of patients afflicted by peripheral arterial occlusive disease. Studies have demonstrated that carboxytherapy improves skin elasticity, improves circulation, encourages collagen repair, improves the appearance of fine lines and wrinkles, and destroys localized fatty deposits. Carbon dioxide is a natural constituent of our very being. We breathe in oxygen, and we exhale carbon dioxide. Plants take up the carbon dioxide, and in turn give us the oxygen that we need. There are no known risks associated with carboxytherapy.
