According to our (Global Info Research) latest study, the global Medical COC and COP market size was valued at US\$ 169 million in 2025 and is forecast to a readjusted size of US\$ 292 million by 2032 with a CAGR of 8.2% during review period.

Medical COC and COP are materials used in the medical field and meet medical grade standards. COC is a thermoplastic polymer made by copolymerizing cyclic olefin monomers with other monomers such as ethylene. In the medical field, it's a high - performance material. The presence of cyclic structures in its molecular chain endows it with many unique physical and chemical properties. COP is a polymer mainly obtained by polymerizing cyclic olefin monomers. It has a similar structure to COC, but the synthesis process may focus more on the polymerization of cyclic olefin monomers. It also shows excellent performance in medical applications.
